

NUTRIGRAZE

HYBRID SUDAN GRASS SORGHUM

What is Nutrigraze?

Nutrigraze is a Brown Midrib Sorghum x Sudangrass Hybrid with exceptional palatability and with the addition of a Production +Plus BMR gene has shown marked reduction of lignin content in the plant. Lignin is the component that is generally regarded as the primary factor limit in the extent of forage fiber digestion. This totally new hybrid has shown an 18.9% average increase in feed value compared to conventional hybrids.

Why Nutrigraze?

Nutrigraze offers a premium summer annual hybrid with the same agronomic characteristics found in a conventional sorghum x sudangrass hybrid. Conventional sorghum x sudangrass offers excellent hay quality, heavy pasturing, superior drought tolerance, and wide adaptability. Nutrigraze, with the Production +Plus BMR gene, offers the added bonus of increased utilization and efficiency.

**The same precaution for prussic-acid poisoning should be observed as with all sorghum X sudan grass hybrids, sudan grass crops, etc. Forage produced from Nutrigraze seed should not be feed to horses.*
