

SURPASS BMR 6

A new value added BMR hybrid sorghum sudangrass that delivers highly digestible forage

Surpass is a short structured plant with twice the number of leaves as a conventional sorghum sudangrass

High leaf percentage allows easier harvest with a faster dry down

Nonsenscent with tremendous green leaf retention extending the forage production period

RFQ values comparable to alfalfa

Provides energy and protein while improving animal health through a forage diet with readily digestible fiber.

35-50% more leaf matter than comparative BMR hybrids

15-25% less lignin content than comparative BMR hybrids

Benefits of BMR 6 hybrids

- Low lignin levels makes Surpass a highly digestible forage and reduces the amount of additional feed needed to gain maximum animal performance.
- Reduced wastage, stalks are digestible so the animals consume the total plant matter
- Reduced phosphorus excretion
- Increased feed value in each bale means that the number of bales needed can be reduced giving a savings in haymaking costs.

Agronomic Characteristics

- Seed Count: 14-15,000 seed per pound
- Maturity 70-80 days to flower
- Height 5-6 ft at heading
- Recovery after cutting is Excellent
- Drought tolerance is Excellent
- Mid-rib color: Brown
